RELEVENT EXPERIENCE

CivicConnect   **Sep 2022 - Dec 2022**
Web Developer Intern   *Beamsville, ON*
- Developed user interfaces using modern JavaScript frameworks, HTML5, CSS3, and jQuery, enhancing user experience and functionalityby 10%
- Worked closely with UX/UI designers to ensure proper implementation of designs across multiple devices while adhering to established style guides.
- Deployed applications on cloud-based platforms like AWS or Google Cloud Platform to scale infrastructure according to demand.

Wireless+(1723697 Ontario Inc)   **May 2022 - Present**
Web Developer   *Toronto, ON*
- Developed user interfaces with JavaScript, HTML, and CSS, improving user experience and site navigation for customers interested in products, which resulted in increased website traffic and usage by 15%
- Enhanced website functionality by optimizing existing code and implementing new features, leading to faster load times and improved user engagement shown by increase in website visits by 10%
- Conducted thorough quality assurance testing to identify and resolve issues before deployment, ensuring a smooth, fast, and error-free user experience

The Source   **Oct 2022 - Jan 2023**
Sales Associate   *Toronto, ON*
- Sold various electronic products and services, such as internet and phone plans, resulting in meeting the monthly sales quotas and even exceeding them by 20%
- Negotiated deals to encourage customers to purchase phone plans or phone + plan contracts, leading to higher sales and customer retention
- Provided basic customer service through returns, purchases, and exchanges, using Microsoft Word for documentation, which improved customer satisfaction and streamlined service processes
- Tracked and referenced Excel-based reports and CRM data to see what the most sold products/services are and how to meet the individual and group monthly quotas

PROJECTS

Quick and Easy Grade Conversions
- Built a functioning grade conversion site with HTML and CSS on the front-end and Javascript on the back-end
- The website is evenly prevalent on the back-end elements and the front-end elements making up the sites appearance

Solving Number Problems
- Built a functioning site that solves various number based problems with heavy usage of JS on the back-end, plus usage of HTML and CSS on the front-end
- Used JS to perform many back-end tasks revolving around algorithms such as determining whether the entered number is prime or not

Electronic Bookshop
- An online bookshop where user can purchase the book they want according to the authors selected
- Many functions incorporated such as being able to add and remove books, go back to menu etc
- Used Eclipse IDE, and developed this project using Java Servlets and MySQL database(which stored the data of the books & authors)

3D Rendered Models Online Commerce Store
- An online store where customers can purchase 3D models for use in animation, virtual simulation, game development etc.
- Used Next.js framework for developing this project, and deployed the project on vercel
- Primarily worked on updating user profile, user registration page, and product filtering. Also developed the backbone and early parts of cart and checkout functionality
